Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. - 9. (Cancelled)

5

10. (New)

A wrapping for herbal and vegetable material made out of textile and strong enough to be chewed on and capable of letting through the liquid with the dissolved substances but holding back the vegetable pulp with a bit of string placed around the twisted neck of the opening characterised in that the wrapping is a bag with 10 smooth edgings and the angular points are rounded off, and

the sealed opening of the bag is smooth and the bag is not sealed with a bit of string but with a cable-tie and the cable-tie is not placed around the twisted neck of the opening of the bag but placed mostly on the inside of the opening of the bag making it possible for the opening of the bag to be folded to the inside while sealing the opening of the bag and to accomplish this the opening of the bag is divided into a square 15 and near the four angular points of the square and on both sides of each angular point of the square the cable-tie is tacked through the material of the bag and the cable-tie is now on the outside of the bag for a little bit at three of the angular points of the square and the two ends of the cable-tie are on the outside of the bag near a remaining fourth angular point, and filling the bag and folding the opening to the inside is easy because the hoop formed by the plastic strand of the cable-tie supplies the opening of the bag with shape and firmness, 20 and after the bag is filled the size of the hoop formed by the plastic strand of the cable-tie can be minimised while sealing the opening of the bag to make it possible and more comfortable to hold the bag in the mouth and in between the molars, and

when not cut off the plastic strand of the cable-tie could be used like the stick of a lollipop to hold the wrapping into the mouth, and

25 instead of the bag the wrapping is a round piece of cloth with a diameter of 12 cm and the manner in which the cable-tie is tacked through the round piece of cloth makes it possible to fold the edging of the round piece of cloth to the inside while sealing the wrapping, and on the round piece of cloth we imagine a circle with a diameter of 9 cm and two square lines all having the same centre as the round piece of cloth, and near the intersection points of the circle and the square lines as well as on both sides of these intersection 30 points the cable-tie is tacked through the cloth resulting in the cable-tie being on the underside of the piece of cloth for a little bit at three intersection points as well as both ends of the cable-tie being on the underside of the piece of cloth at a remaining fourth intersection point, and the diameter of the round piece of cloth can be varied and a bigger diameter probably will not be needed but a smaller diameter could come in handy, and the wrapping could be filled and sealed by the manufacturer, and the wrapping could be filled and 35 sealed by a consumer himself.

11. (New)

A wrapping as recited in claim 10 characterised in that the twisted neck of the opening of the wrapping is sealed with a bead-like form (K), and (K) has a hole and the contents of its hole can be held on tight to using 40 a square placed countersink screw to produce the needed pressure, and

(K) can be made out of two hinging parts, and a countersink screw or a clasp to fasten them, and one part can have a gully and the other part can have a ledge that fits into the gully making it possible to seal the opening of the wrapping by pressing it tight in between them, and a raw or rugged structure could be placed on the bottom of the gully and on the top of the ledge to have more grip on the contents of the gully, and to prevent the fastener from slipping off while being used a thickening could be made round the opening of the bag, and the sealed opening of the wrapping can be prevented from spreading and ravelling out by making sure the sealed opening of the wrapping will not be sticking out of the other end of the hole of (K), and

an independent plastic strand with ribs and a thickening at one end could be used to seal the wrapping and therefore it could be led through (K) to be hold on tight to, and a rugged structure or a little rectangle placed in an oblique line on the inside of (K) as if it was a common cable-tie could be used to prevent the strand from slipping, and if (K) is made out of two parts the little plastic strand and the wrapping could be re-used.

12. (New)

15 A wrapping as recited in claim 10 characterised in that the cable-tie to seal the opening can be re-used, and the cable-tie can be re-used because the little rectangle that has been placed in an oblique line with the strand in order to prevent the ribs on the strand from going into a wrong direction can be moved to release the ribs of the strand as well as be replaced afterwards to block the ribs again, and the little rectangle could be moved and replaced using a screw or because a home the little rectangle is placed in is made out of two parts that

20 can be disconnected and reconnected again repeatedly, and

the plastic strand with the ribs can be an independent part with a thickening at one end, and the end with the thickening should get stuck inside an opening of a home the little rectangle of the cable-tie is placed in, and this in order to make them act as one during the use of them.

25 13. (New)

A wrapping as recited in claim 10 characterised by the wrapping being a round piece of cloth as recited in claim 1 and the wrapping can also be a square piece of cloth of about 15 cm wide, and ever decreasing circles and two square lines all having the same centre are marked on the piece of cloth, and this piece of cloth could be combined with a bit of string and a needle or one or more cable-ties in order to let a consumer cut and 30 finish a wrapping himself into the size he needs and tack a bit of string or a cable-tie through it.

14. (New)

A wrapping as recited in claim 10 characterised in that a bit of string is tacked through the cloth in a way the opening of the wrapping can be folded to the inside while sealing it, and to supply the opening of the 35 wrapping with shape and firmness the wrapping is combined with a frame that is bend out of metal wire, and the frame has four hooks in its opening, and the hooks all have a same distance to each other, and the bit of string that is going to seal the opening of the wrapping can be placed around the hooks to supply the opening of the wrapping with shape and firmness, and the shape and firmness the opening is supplied with makes it easier to fill the wrapping and to fold the opening of the wrapping to the inside after which the wrapping can 40 slide from the hooks to be sealed, and

the frame can be a flat piece of firm plastic or a cylindrical shape with an opening and four hooks in its opening all having a same distance to each other, and

to be able to re-use the wrapping without having to run through the material an other bit of string the endings of the bit of string could be led through the bead-like form (K) instead of being knotted together and 5 (K) could hold on to the bit of string tightly.

15. (New)

A wrapping as recited in claim 10 and the use of this wrapping characterised in that the wrapping is in combination with a mixture of herbal or vegetable material, and the mixture is especially made to be used in 10 combination with the wrapping, and in the process of compiling the mixture a selection is made regarding the capability of the mixture or the component parts to be dissolved in a liquid or in particular in the sputum and the speed and the duration in which it will dissolve, and

a selection is made regarding the taste and the possible effects on the state of mind or the temper or the health or the way the consumer experiences the selection, and the mixture can be made regarding 15 characteristics like taste and the effect on the state of mind or the temper or the health.

16. (New)

A bag with a bit of string placed around the twisted neck of the opening characterised in that the sealed opening of the bag is smooth and the bag is not sealed with a bit of string but with a cable-tie and the cable-20 tie is not placed around the twisted neck of the opening of the bag but placed mostly on the inside of the opening of the bag making it possible for the opening of the bag to be folded to the inside while sealing the opening of the bag and to accomplish this the opening of the bag is divided into a square and near the four angular points of the square and on both sides of each angular point of the square the cable-tie is tacked through the material of the bag and the cable-tie is now on the outside of the bag for a little bit at three of the 25 angular points of the square and the two ends of the cable-tie are on the outside of the bag near a remaining fourth angular point, and filling the bag and folding the opening to the inside is easy because the hoop formed by the plastic strand of the cable-tie supplies the opening of the bag with shape and firmness, and after the bag is filled the size of the hoop formed by the plastic strand of the cable-tie can be minimised while sealing the opening of the bag, and

30 instead of the bag the wrapping is a round piece of cloth and the manner in which the cable-tie is tacked through the round piece of cloth makes it possible to fold the edging of the round piece of cloth to the inside while sealing the wrapping, and on the round piece of cloth we imagine a circle and two square lines all having the same centre as the round piece of cloth, and near the intersection points of the circle and the square lines as well as on both sides of these intersection points the cable-tie is tacked through the cloth 35 resulting in the cable-tie being on the underside of the piece of cloth for a little bit at three intersection points as well as both ends of the cable-tie being on the underside of the piece of cloth at a remaining fourth intersection point, and the diameter of the round piece of cloth can be varied.

17. (New)

40 A bead-like form (K) characterised in that (K) has a hole and the contents of its hole can be hold on tight to

using a square placed countersink screw to produce the needed pressure, and

(K) can be made out of two hinging parts, and a countersink screw or a clasp to fasten them, and one part can have a gully and the other part can have a ledge that fits into the gully making it possible to hold on to its contents by pressing it tight in between them, and a raw or rugged structure could be placed on the

5 bottom of the gully and on the top of the ledge to have more grip on the contents of the gully, and

an independent plastic strand with ribs and a thickening at one end could be used to hold on to the contents of (K) instead of (K) and therefore it could be led through (K) to be hold on tight to, and a rugged structure or a little rectangle placed in an oblique line on the inside of (K) as if it was a common cable-tie could be used to prevent the strand from slipping, and if (K) is made out of two parts the plastic strand could

10 be re-used.

18. (New)

A cable-tie characterised in that the cable-tie can be re-used, and the cable-tie can be re-used because the little rectangle that has been placed in an oblique line with the strand in order to prevent the ribs on the strand 15 from going into a wrong direction can be moved to release the ribs of the strand as well as be replaced afterwards to block the ribs again, and the little rectangle could be moved and replaced using a screw or because a home the little rectangle is placed in is made out of two parts that can be disconnected and reconnected again repeatedly, and

the plastic strand with the ribs can be an independent part with a thickening at one end, and the end 20 with the thickening should get stuck inside an opening of a home the little rectangle of the cable-tie is placed in, and this in order to make them act as one during the use of them.

19. (New)

A piece of cloth characterised in that there are ever decreasing circles and two square lines all having the 25 same centre marked on the piece of cloth, and this piece of cloth could be combined with a bit of string and a needle or one or more cable-ties in order to let a consumer cut and finish a wrapping himself into the size he needs and tack a bit of string or a cable-tie through it.

20. (New)

30 A frame characterised in that the frame is bend out of metal wire, and the frame has four hooks in its opening, and the hooks all have a same distance to each other, and the bit of string that is going to seal the opening of a wrapping can be placed around the hooks to supply the opening of a wrapping with shape and firmness, and the shape and firmness the opening is supplied with makes it easier to fill a wrapping and to fold the opening of a wrapping to the inside after which a wrapping can slide from the hooks to be sealed, 35 and

the frame can be a flat piece of firm plastic or a cylindrical shape with an opening and four hooks in its opening all having a same distance to each other.

21. (New)

40 A mixture of herbal or vegetable material characterised in that the mixture is especially made to be used in

combination with a wrapping, and in the process of compiling the mixture a selection is made regarding the capability of the mixture or the component parts to be dissolved in a liquid or in particular in the sputum and the speed and the duration in which it will dissolve, and

a selection is made regarding the taste and the possible effects on the state of mind or the temper or 5 the health or the way the consumer experiences the selection, and the mixture can be made regarding characteristics like taste and the effect on the state of mind or the temper or the health.
